Introduction

Search engine design and implement by Group C

How to use

First generate index by index.py

Skip if already has index

```
1   # Build ElasticSearch index
2   # Must running ElasticSearch before!!!!
3   insert_data_to_es()
```

Start flask service in app.py

```
1   host = "127.0.0.1"
2   port = 5000
3   app.run(host=host,port=port,debug=True)
```

Enter homepage

Eg: http://127.0.0.1:5000/

Needs to do

- [ ] BM25
- [ ] Relevance analysis (needs generate labels first)
